

Why DSM lossg Doesn't Decrease

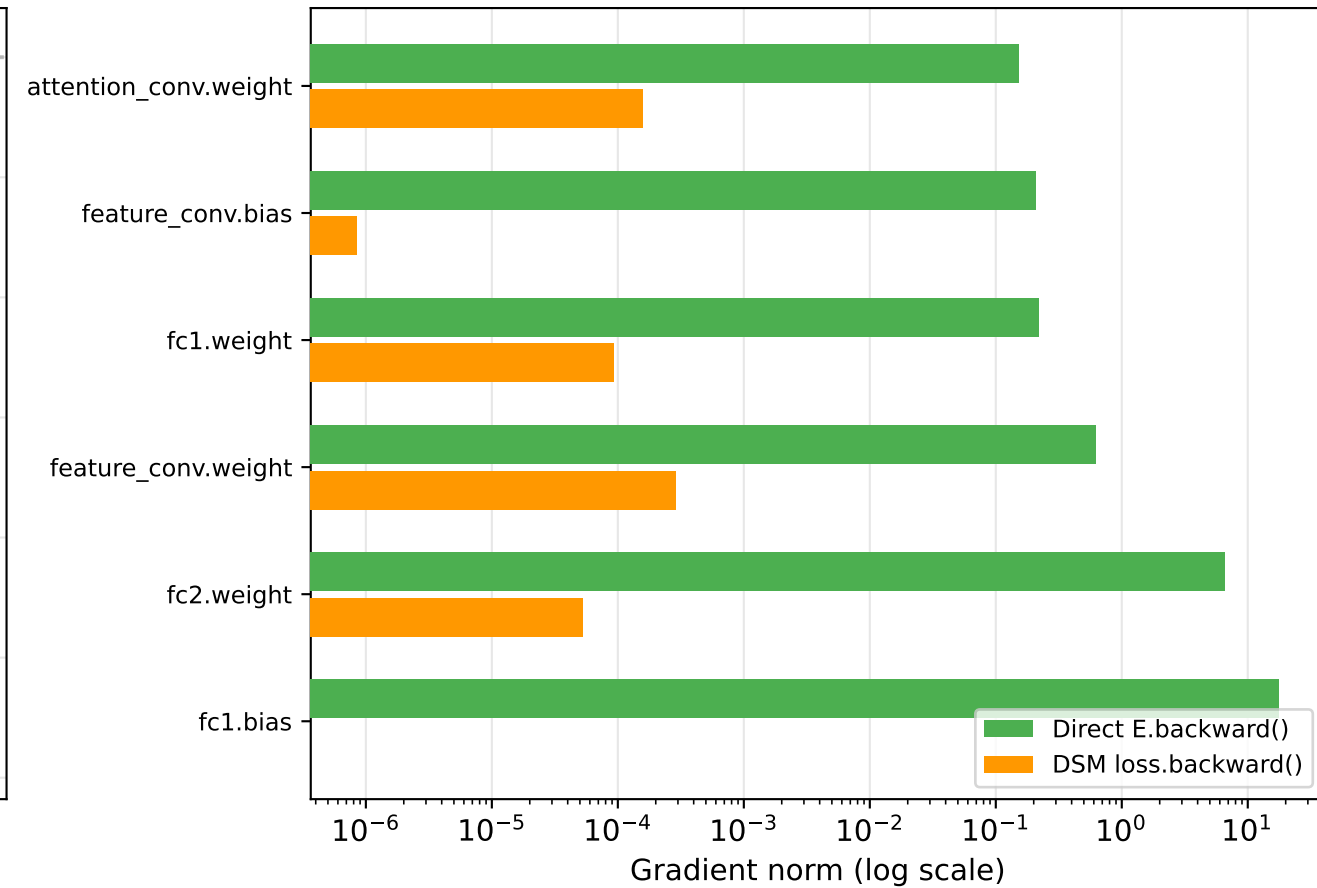

① Model Gradient vs Target Score
(20,000× mismatch)

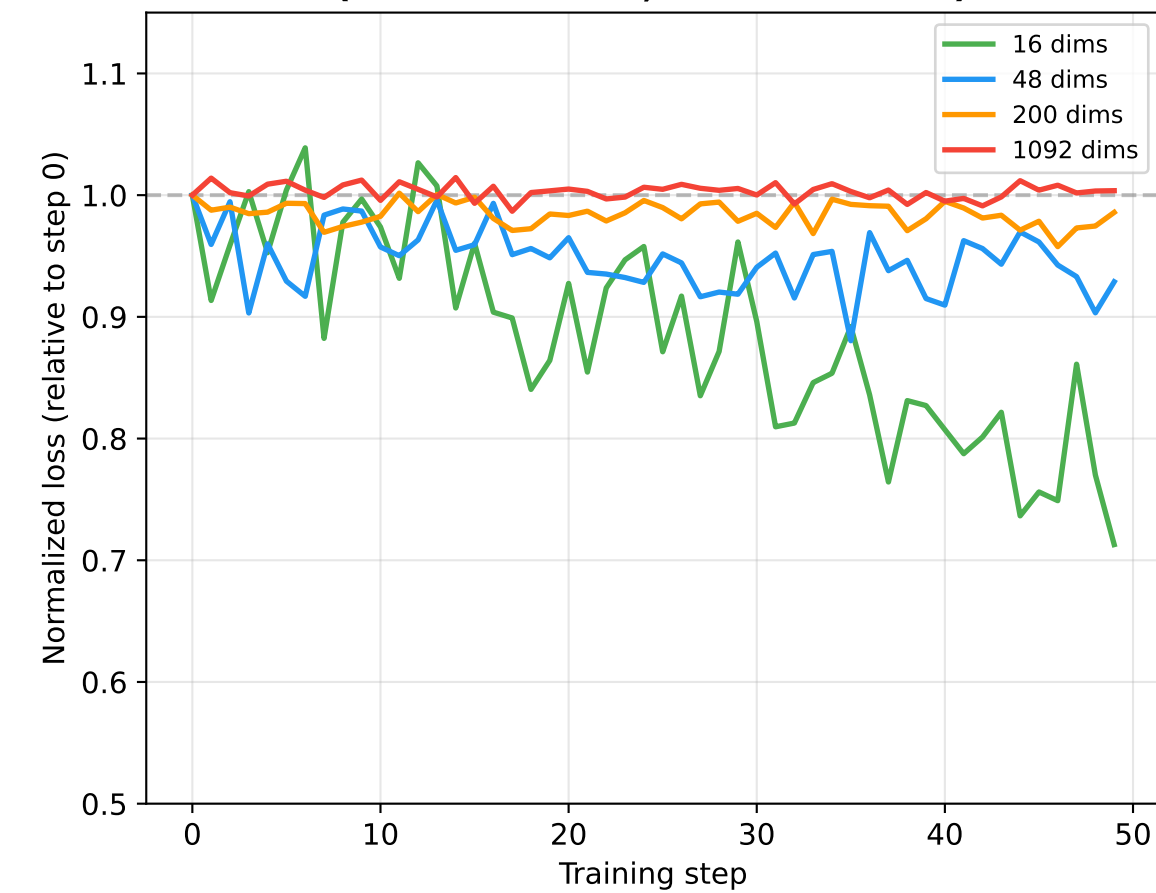

② DSM Learning vs Feature Dimensions
(works at low dims, fails at high)

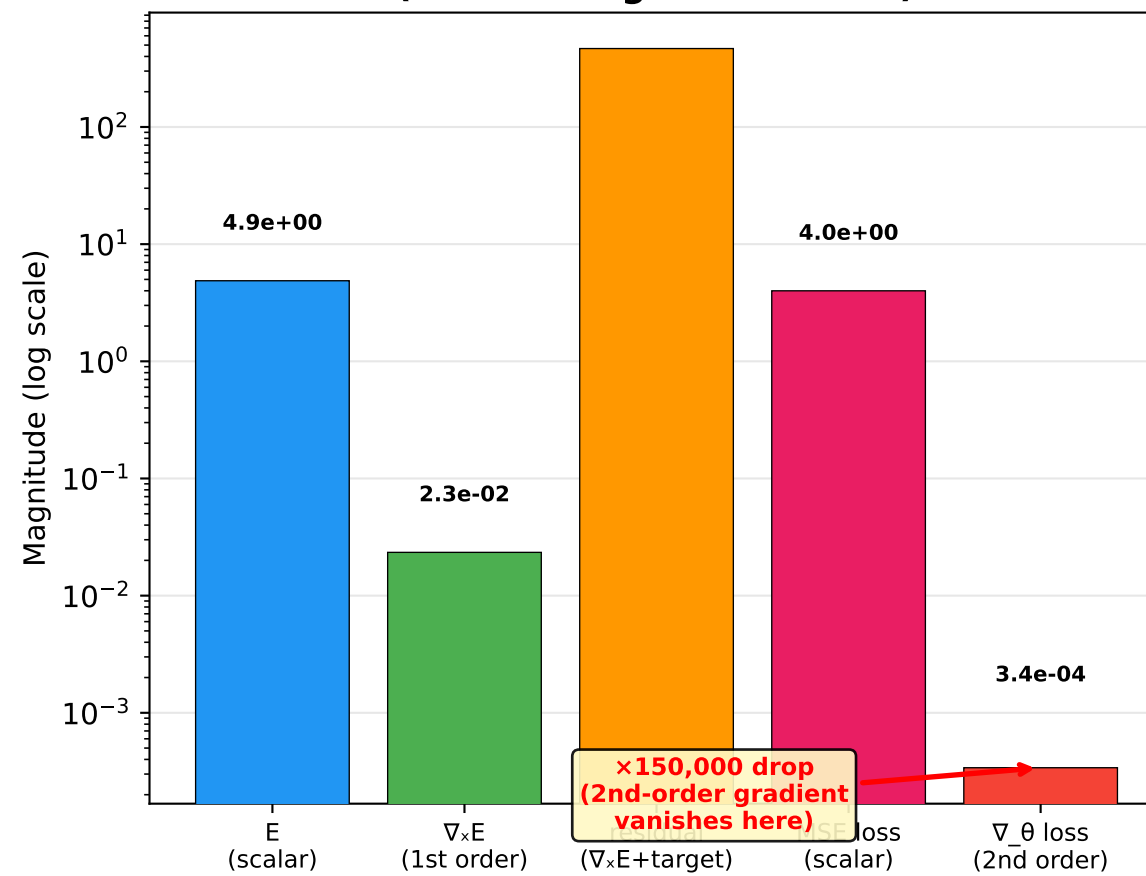

③ Param Gradients: Direct vs DSM
(DSM grads ~100,000× smaller)

④ DSM Learning Curves by Dim Count
(16 dims learns, 1092 dims flat)

⑤ Signal Flow Through DSM
(2nd-order grad vanishes)

⑥ DSM Works at Low Dims
(concept is sound, scaling is not)
